

# Our LEAF-GUARD will keep your gutters clean as a hound's tooth.

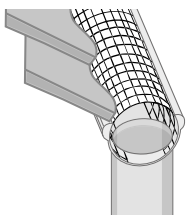

The lightweight and easy-to-install plastic mesh tube POLY-NET® LEAF-GUARD fits perfectly in the gutters to keep the autumn leaves out. Being UV-resistant and weather-proof, this faithful servant will stay on guard for years to come. And, as it is recyclable, the ecological footprint is lighter, too. Effective & efficient high-end German engineering – pure and simple.

## EASY TO INSTALL

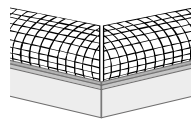

Press the plastic mesh tube gently together and place it inside the gutter with the slit downward.

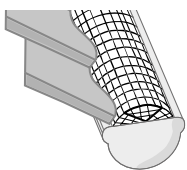

If the roof doesn't have an overhang that keeps the tube in place, fix it to the gutter

Cut out openings for downpipes and remove the downpipe sieves.

Make a mitre cut in the corners.

To prevent birds from nesting inside the tube, close off the ends by folding them tightly to the end wall of the gutter.

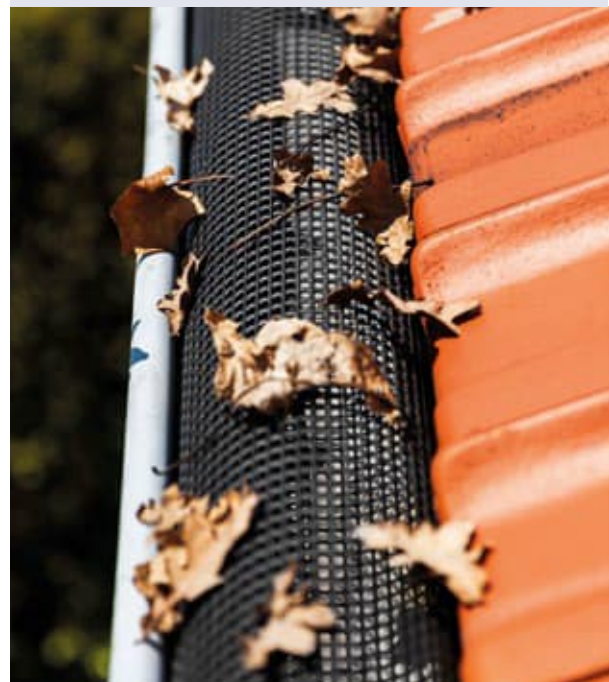

## GET THE PERFECT FIT

| TECHNICAL DATA |           |
|----------------|-----------|
| Gutter width   | Tube type |
| 80 mm          | R 174/0   |
| 100 and 125 mm | R 172/0   |
| 150 and 180 mm | R 178/0   |

## SIMPLE YET GENIOUS

Leaves that fall remain on the net surface, dry out and are blown away by the wind, keeping the gutter clean as a whistle.
